JAVA PROJECT REPORT ON

Digital Complaint Registration and Status Monitoring System

Submitted by

SABARIVEL.V.S

25BIT050

Under the Guidance of

DILIBAN.A

Technical Trainer

Technical Department, KG College of Arts and Science

Academic Year: **2025 – 2026**

APRIL 2026

Semester: **II**

DECLARATION

I hereby declare that the project entitled "**PROJECT TITLE"** submitted in partial fulfillment of the requirements for the course [**Course Name]** is a **record of my original work** carried out under the guidance of **[Trainer Name]**, Technical Trainer, Technical Department, KG College of Arts and Science.

I further declare that this project has not been submitted previously, either in part or in full, for the award of any degree, diploma, or other similar title, at this or any other institution.

I have acknowledged all sources of information used in this project wherever applicable.

April 2026

Coimbatore

_____

(SABARIVEL.V.S)

CERTIFICATE

This is to certify that the project entitled **"DIGITAL COMPLAINT REGISTRATION AND STATUS MONITORING SYSTEM"** is a **bona fide work** carried out by **[SABARIVEL.V.S] [BS.c IT/2025-28**

], [**BS.c Information Technology] KG College of Arts & Science**, in partial fulfillment of the requirements for the course **[Java Programing]**.

This project has been completed under my supervision and guidance during the academic period **April 2026**.

Place: COIMBATORE

Date:

Submitted for the Viva-Voce Examination held on **09.04.2026**

Guide:
(Technical Trainer, KGCAS)

ABSTRACT

The Digital Complaint Registration and Status Monitoring System is designed to provide an efficient and transparent platform for registering and managing complaints in an organization. Traditional complaint handling methods are often manual, time-consuming, and lack proper tracking mechanisms, leading to delays and user dissatisfaction. This system aims to overcome these limitations by digitizing the entire complaint management process.

The proposed system allows users to submit complaints through an online interface and receive a unique complaint ID for future reference. Users can track the status of their complaints in real time, ensuring transparency and accountability. On the administrative side, the system enables authorized personnel to view, manage, and update complaint statuses efficiently through a centralized dashboard.

The system is developed using modern programming technologies and follows a structured approach to ensure reliability, scalability, and ease of use. It includes features such as user authentication, complaint categorization, status tracking, and report generation. The implementation of this system reduces paperwork, minimizes human errors, and improves the overall efficiency of complaint resolution.

In conclusion, the Digital Complaint Registration and Status Monitoring System provides a practical and effective solution for automating complaint management processes, making them faster, more reliable, and user-friendly.

1. INTRODUCTION

Objective

The primary objective of this system is to develop an efficient and user-friendly platform that enables users to register complaints digitally and monitor their status in real time. The system aims to:

Eliminate manual paperwork

Reduce processing time

Increase transparency in complaint handling

Improve accountability of authorities

1.2 Overview

In many organizations, complaint handling is still done manually, leading to delays, mismanagement, and lack of proper tracking. This system digitizes the entire process by allowing users to:

Submit complaints online

Track complaint progress

Receive timely updates

The system consists of a front-end interface for users and an admin panel for managing complaints. It uses a database to store complaint details and status updates.

1.3 Features

Secure user authentication system

Complaint categorization (e.g., technical, service, billing)

Auto-generated complaint ID

Real-time status updates (Pending, In Progress, Resolved)

Admin control panel

Complaint history tracking

Email/SMS notification (optional enhancement)

Report generation and analytics

2. PROGRAM ANALYSIS

2. Program Analysis

2.1 Problem Definition

The traditional complaint management system suffers from:

- Lack of transparency
- Delayed responses
- Poor record maintenance
- Difficulty in tracking complaints
- High dependency on manual work

This results in dissatisfaction among users and inefficiency in resolving issues.

2.2 Project Overview

This project introduces a centralized system where:

- Users can easily lodge complaints
- Authorities can manage and resolve complaints efficiently
- All records are stored digitally for future reference

The system ensures that every complaint is assigned a unique ID, making tracking simple and organized.

2.3 Scope and Limitations

Scope

- Can be implemented in colleges, offices, municipalities
- Supports multiple users simultaneously
- Scalable for large databases
- Can be extended to mobile applications

Limitations

- Requires basic technical infrastructure
- Dependent on system security measures
- May require training for non-technical users
- Internet dependency (for web-based systems)

3. SYSTEM DESIGN

3.1 System Architecture

The system follows a three-tier architecture:

1. Presentation Layer – User Interface
2. Application Layer – Business Logic
3. Data Layer – Database

3.2 Modules

1. User Module

- Registration and login
- Submit complaint
- View complaint status
- View complaint history

2. Admin Module

- Login authentication
- View all complaints
- Assign complaints to staff
- Update complaint status
- Generate reports

3. Database Module

- Stores user credentials
- Stores complaint details
- Maintains status logs
- Ensures data integrity

3.3 Data Flow

- User submits complaint → Data stored in database
- Admin retrieves complaint → Updates status
- User checks updated status

4. METHODOLOGY

4.1 Problem Analysis

A detailed study of existing complaint systems was conducted to identify inefficiencies and user requirements. Key focus areas included:

- Ease of use
- Transparency
- Speed of resolution

4.2 System Design

- Database schema designed using tables such as Users, Complaints, Status
- UI designed for simplicity and accessibility
- Use of structured programming for modular development

4.3 Program Development

The system can be developed using:

- **Frontend:** HTML, CSS, JavaScript
- **Backend:** Python / Java / PHP
- **Database:** MySQL / SQLite

Key focus:

- Clean code structure
- Error handling
- Data validation

4.4 Testing and Validation

Testing ensures system reliability:

- **Unit Testing:** Individual components tested
- **Integration Testing:** Modules tested together
- **System Testing:** Entire system tested
- **User Acceptance Testing:** Verified by users

4.5 Result and Documentation

The system successfully:

- Registers complaints

- Generates unique IDs
- Allows real-time tracking
- Enables admin control

Documentation includes:

- User manual
- Technical documentation
- Test cases

4.6 Algorithm (Detailed)

1. Start
2. Display login/register page
3. If new user → register
4. Else → login
5. Display dashboard
6. User selects "Submit Complaint"
7. Enter complaint details
8. Generate unique complaint ID
9. Store data in database
10. Notify admin
11. Admin logs in
12. Views complaint list
13. Updates complaint status
14. Save changes
15. User checks status
16. Display updated result
17. End

4.7 Flowchart (Explanation)

- Start
- Login/Register
- Submit Complaint

- Generate ID
- Store in Database
- Admin Review
- Update Status
- User Views Status
- End

(You can draw using arrows and symbols in your record)

5. SOURCE CODE

```
import java.util.*;

class Complaint {
    int id;
    String name;
    String issue;
    String status;

    Complaint(int id, String name, String issue) {
        this.id = id;
        this.name = name;
        this.issue = issue;
        this.status = "Pending";
    }
}

public class ComplaintSystem {
    static ArrayList<Complaint> complaints = new ArrayList<>();
    static int count = 1;

    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        while (true) {
            System.out.println("\n--- Complaint System ---");
            System.out.println("1. Register Complaint");
            System.out.println("2. View Complaints");
            System.out.println("3. Update Status");
```

```
        System.out.println("4. Exit");

        System.out.print("Enter choice: ");
        int choice = sc.nextInt();
        sc.nextLine();

        switch (choice) {
            case 1:
                register(sc);
                break;
            case 2:
                view();
                break;
            case 3:
                update(sc);
                break;
            case 4:
                System.exit(0);
            default:
                System.out.println("Invalid choice");
        }
    }
}

static void register(Scanner sc) {
    System.out.print("Enter Name: ");
    String name = sc.nextLine();

    System.out.print("Enter Issue: ");
```

```
        String issue = sc.nextLine();

        Complaint c = new Complaint(count++, name, issue);
        complaints.add(c);

        System.out.println("Complaint Registered Successfully! ID: " + c.id);
    }

    static void view() {
        if (complaints.isEmpty()) {
            System.out.println("No complaints found.");
            return;
        }

        for (Complaint c : complaints) {
            System.out.println("\nID: " + c.id);
            System.out.println("Name: " + c.name);
            System.out.println("Issue: " + c.issue);
            System.out.println("Status: " + c.status);
        }
    }

    static void update(Scanner sc) {
        System.out.print("Enter Complaint ID: ");
        int id = sc.nextInt();
        sc.nextLine();

        for (Complaint c : complaints) {
            if (c.id == id) {
```

```
            System.out.print("Enter new status: ");
            c.status = sc.nextLine();
            System.out.println("Status Updated!");
            return;
        }
    }

    System.out.println("Complaint not found.");
  }
}
```

6. INPUT AND OUTPUT SCREENS

```
--- Complaint System ---
1. Register Complaint
2. View Complaints
3. Update Status
4. Exit
Enter choice: 4
```

```
--- Complaint System ---
1. Register Complaint
2. View Complaints
3. Update Status
4. Exit
Enter choice: 3
Enter Complaint ID: 1
Enter new status: theft
Status Updated!
```

```
--- Complaint System ---
1. Register Complaint
2. View Complaints
3. Update Status
4. Exit
Enter choice: 2

ID: 1
Name: sabari
Issue: Robbery
Status: Pending
```

```
--- Complaint System ---
1. Register Complaint
2. View Complaints
3. Update Status
4. Exit
Enter choice: 1
Enter Name: sabari
Enter Issue: Robbery
Complaint Registered Successfully! ID: 1
```

7. DISCUSSION & CONCLUSION

7.1 Discussion

The developed system significantly improves the efficiency of complaint handling. It minimizes manual errors and provides a transparent mechanism for both users and administrators. The system can be further enhanced by integrating:

- Mobile app support
- AI-based complaint prioritization
- Chatbot assistance

7.2 Conclusion

This project successfully demonstrates how digital transformation can improve traditional processes. The system provides a structured, efficient, and scalable solution for complaint management.
